

Acknowledgements

Luc Anselin wishes to acknowledge the support of the US National Science Foundation (the research reported on in Chapter 17 was supported in part by Grant SBR-9410612). Special thanks are due to Antony Unwin for providing Figure 1 on Manet, and to Noel Cressie and Jürgen Symanzik for providing Figures 4 and 5 on ArcView-XGobi.

Richard J Aspinall would like to thank Peter Aspinall, Simon Aspinall, David Balharry, Dick Birnie, Marianne Broadgate, Marsailidh Chisholm, Roy Haines-Young, Matt Hare, Rachel Harvey, Ann Humble, Brian Lees, Kim Lowell, David Maguire, Jeff Maxwell, Elaine McAlister, David Miller, Julia Miller, Diane Pearson, Jonathan Raper, Allan Sibbald, Neil Veitch, Paul Walker, and Joanna Wherrett for their many and varied contributions to his thinking on the topics discussed in Chapter 69.

Mike Barnsley wishes to acknowledge the Natural Environment Research Council for data used to construct Plates 21 and 22.

Barry Boots would like to thank Michael Tiefelsdorf who provided the results in Table 1 and who drew Figures 11, 12, and 13 in Chapter 36; and Atsuyuki Okabe and Narushige Shiode who drew Figure 16 using software package PLVOR created by Toshiyuki Imai of the University of Tokyo.

Thomas Cova would like to thank Michael Goodchild for the invitation to contribute to this book and David Maguire for helpful comments on earlier drafts.

Susan Elshaw Thrall and **Grant Ian Thrall** would like to thank Mr Mark McLean of the Department of Geography at University of Florida for his comments on the layout of Table 1 in Chapter 23, and for his comments on the section on ‘ready-made maps’.

Manfred Fischer gratefully acknowledges a research grant provided by the Austrian Ministry for Science, Research and Art (EZ 308.937/2 – W/3/95).

Peter Fisher’s chapter was completed when the author was Visiting Fellow at the Department of Geomatics,

University of Melbourne. The use of facilities, and the kind invitation to visit are both gratefully acknowledged. Figure 3 in Chapter 13 is reproduced with the kind permission of Taylor and Francis. The assistance of Alan Strachan and Paul Longley is also gratefully acknowledged.

Anthony Gatrell and Martyn Senior are grateful to the following for providing, or allowing them to modify, illustrations: Dr Anders Schaerstrom, Dr Danny Dorling, Professor Gerry Rushton, Professor Graham Moon, and Dr Andy Jones.

Art Getis would like to thank Judy Getis, Stuart Phinn, and Serge Rey for reviewing his chapter.

Michael Goodchild acknowledges the support of the National Science Foundation for the National Center for Geographic Information and Analysis (SBR 88–10917 and SBR 96–00465) and the Alexandria Digital Library (IRI 94–11330).

Gerard Heuvelink would like to thank Dr J Bouma and Dr A Stein (Agricultural University Wageningen) for permission to use the Allier dataset.

Mark Horn: acknowledgement is due to Eamonn Clifford and Christine Hansford at the Office of the Surveyor-General of New South Wales, Australia, who produced the illustrations for Chapter 67.

Michael Hutchinson and John Gallant gratefully acknowledge the assistance of Tingbao Xu and Janet Stein in the production of the figures in Chapter 9.

Dave MacDevette, Richard Fincham, and Greg Forsyth would like to thank Adele Wildsehut of the Centre for Rural and Legal Studies, Stellenbosch for permission to reproduce Figure 3 in Chapter 65 from Larry Zietsman’s original.

David Mark’s paper is a result of research at the US National Center for Geographic Information and Analysis, supported by a grant from the National Science Foundation (SBR-88-10917); support by NSF is gratefully acknowledged.

Robin McLaren wishes to thank the Ministry of Agriculture in Hungary for granting permission to use the cadastral map of Budapest (Figure 5 in Chapter 61).

Jeffery R Meyers wishes to express his gratitude for the invaluable research, editorial, and narrative review assistance provided by Christine M Condit in the preparation of his chapter. Without Ms Condit's efforts, the work would have suffered, and quite possibly not have been completed at all.

Lubos Mitas and Helena Mitasova wish to acknowledge that data for Plates 26 and 27 were supplied by K Auerswald of the Technische Universität München and S Warren of the US Army Construction Engineering Research Laboratories. Data for Plate 28 were supplied by L A K Mertes, Department of Geography, University of California Santa Barbara; data for plate 29 by L Iverson, USDA Forest Service, Delaware, Ohio; and data for Plates 30 and 31 are from US EPA Chesapeake Bay Program Office. The research in GIS applications of spline interpolation methods was supported in part by Strategic Environmental Research and Development Program (SERDP).

Harlan Onsrud's chapter is based upon work partially supported by the National Center for Geographic Information and Analysis (NCGIA) under National Science Foundation grant No. SBR 88-10917. Any opinions, findings, and conclusions are those of the author and do not necessarily reflect the views of the National Science Foundation.

Stan Openshaw and Seraphim Alvanides wish to acknowledge that Cray T3D time was provided by EPSRC under Grant GR/K43933. The 1991 Census data and boundary files are provided by ESRC and JISC and the resulting maps are all Crown Copyright.

Donna Peuquet's work was supported by National Science Foundation grant no. FAW 90-27. Portions of this work were previously published in Donna Peuquet 1988 'Representations of geographic space: toward a conceptual synthesis' in *Annals of the Association of American Geographers* 78: pages 375–94.

John Pickles draws on Chapter 1 of *Ground Truth*, the founding proposal and progress reports of Initiative 19 (I-19) of the National Center for Geographic Information Analysis (NCGIA), as well as his article 'Tool or science? GIS, techno-science, and the theoretical turn' in *Annals of the Association of American Geographers*. In particular, the chapter owes a great deal to the writings of, and discussion with, a small group of colleagues working in the liminal (and at times uncomfortable) spaces between GIS and social theory: Nick Chrisman, Michael Curry, Jon Goss, Carol Hall, Trevor Harris, Ken

Hillis, Bob McMaster, David Mark, Patrick McHaffie, Roger Miller, Harlan Onsrud, Eric Sheppard, Paul Schroeder, Dalia Varanka, Dan Weiner; and at the University of Kentucky, Oliver Froehling, Eugene McCann, and Steve Hanna. The chapter draws heavily on the work of this group in I-19, especially the discussions and presentations of the planning group and participants at the Friday Harbor workshop on Geographic Information and Social Theory (1993), the Koinonia Workshop on the Representation of Space, People, and Nature in GIS (1996), the planning group of I-19 (Helen Couclelis, Michael Curry, Trevor Harris, Bob McMaster, David Mark, Eric Sheppard, and Dan Weiner), and the participants in the Critical Social History of GIS Workshop in Santa Barbara (1996) (Michael Curry, Jon Goss, David Mark, Patrick McHaffie, Roger Miller, and Dalia Varanka). Parts of section 4 lean heavily on the founding proposal for I-19 written by the author, Michael Curry, Trevor Harris, Bob McMaster, David Mark, Roger Miller, Eric Sheppard, and Dan Weiner. The summary of GIS-2 was adapted from I-19 discussions presented by Paul Schroeder and Harlan Onsrud. The salient points governing the new systems for a GIS-2 have been abstracted from the results of I-19 and the Public Participation Project, and these can be found at <http://ncgia.maine.edu/pgis/ppgishom.html>. A discussion list for this issue has been set up at <http://ncgia.spatial.maine.edu/webforum.html>. None of the above are responsible for any egregious errors, misinterpretations, or outrageous claims.

Writing the chapter was aided immensely by the opportunity to present these ideas to the national postgraduate programme in geography at the University of Turku in Finland. For this opportunity the author is indebted to Harri Anderson of the Department of Geography at Turku and students in the course.

Jonathan Raper would like to acknowledge that Figure 1 in Chapter 5 was developed by John Walker (<http://www.fourmilab.ch>) – the image is based on the Global Topographic Map from the Marine Geology and Geophysics Division of the National Geophysical Data Center, Boulder, Colorado, USA.

David Rhind wishes to thank Ray Harris and Ian Masser for sight of pre-publication versions of their important books cited in Chapter 56. He also gratefully acknowledges his debt to Nancy Tosta's published work on the US National Spatial Data Infrastructure.

Nigel Waters would like to acknowledge comments, suggestions, ideas and references from Shelley Alexander, Chad Anderson, Robert Arthur, Stefania Bertazon, Murray Rice, Terry Woods, and Clarence Woudsma (all of the Department of Geography at the University of Calgary); to Tim Nyerges for supplying copies of his seminal papers; and to Harvey Miller for copies of his most recent papers. Finally, he would like to thank Howard Slavin, President, Caliper Corporation, for providing technical documentation on the TransCAD package and for other support.

Robert Weibel and Geoffrey Dutton wish to thank Frank Brazile for helping with the preparation of illustrations. A number of people have generously provided illustrations or helped with the compilation of figures, including Dietmar Grünreich and Brigitte Husen of the University of Hanover, Corinne Plazanet and Anne Ruas of IGN France, and Chris Jones of the University of Glamorgan. Partial support from the Swiss NSF through project 2100-043502.95/1 is gratefully acknowledged.

John Wilson acknowledges the following permissions for reproduction: Plates 60–62 are reprinted with permission from Hutchinson, Nix, McMahon, and Ord *Africa: a topographic and climatic database (version 1)* © 1995 by Australian National University, Canberra, Australia; Plates 63 and 64 are reprinted with permission from Corbett and Carter ‘Using GIS to enhance agricultural planning: the example of inter-seasonal rainfall variability in Zimbabwe’ *Transactions in GIS 1*: 207–18 © 1997 by GeoInformation International, Cambridge, UK; Figures 1 and 2 in Chapter 70 are reprinted with permission from Bell, Cunningham, and Havens ‘Soil drainage class probability using a soil landscape model’ *Soil Science Society of America Journal* 58: 464–70 © 1997 by Soil Science Society of America, Madison, Wisconsin; Figure 3 is reprinted with permission from Usery, Pocknee, and Boydell ‘Precision farming data management using geographic information systems’ *Photogrammetric Engineering and Remote Sensing* 61: 1383–91 © 1995 by American Society for Photogrammetry and Remote Sensing, Falls Church, Virginia.

The editors and contributors are grateful to the following for permission to reproduce copyright figures and tables:

Atsuyuki Okabe and Narushige Shiode for Figure 16 in Chapter 36; *Computing and Statistics* magazine for Figures 4 and 5 in Chapter 17; Garmin (Europe)

Ltd for Figures 1 and 2 in Chapter 33; Georgia Tech Virtual GIS project for Figure 2 in Chapter 39; IGN France for Figures 13 and 14 in Chapter 10, courtesy of C Plazanet; Institute of Geography, University of Hanover for Figure 15 in Chapter 10; John Wiley & Sons Inc. for permission to reproduce Figures 1 and 2 in Chapter 15; MEGRIN for Table 2 in Chapter 47; Michael Tiefelsdorf for Figures 11, 12, and 13 in Chapter 36; NASA for permission to reproduce Table 2 in Chapter 45 and Table 2 in Chapter 48; New University of Lisbon for Figure 5 in Chapter 29; Oracle Corporation 1996 for Figure 2 in Chapter 29; Swiss Federal Office of Topography, DHM25©1997, 1263a for Figure 16 in Chapter 10; Tables 1 and 2 in Chapter 43 Courtesy of the State of Washington, Department of Natural Resources; Taylor and Francis, London for Figure 2 in Chapter 8 which appeared in *Time in GIS* by Gail Langran (1992) and for Table 1 in Chapter 44; Trimble Navigation Ltd for Figures 3 and 4 in Chapter 33.

We are grateful to the following for permission to reproduce copyright photographs:

A P Jones for Plate 56; American Society for Photogrammetry and Remote Sensing for permission to reproduce Plate 9; Combined Universities Collection of Air Photographs for Plate 19; Figure 2 in Chapter 29 © Caliper Corporation 1996; Figure 5 in Chapter 61 © Department of Lands and Mapping, Ministry of Agriculture, Hungary; ESRI Inc. for Plate 49; Georgia Tech Virtual GIS project for Plate 37; John Wiley & Sons, Chichester, for Plate 56; Kendall Publishing Co. for Figure 2 in Chapter 54; taken from Morgan J M et al (1996) *Directory of Academic GIS Education*; Longman for Plate 7 which appeared in Kraak and Ormeling *Cartography, visualisation of spatial data*, 1996; Microsoft *Encarta World Atlas* for Plate 8; New University of Lisbon for Plate 40; Office of the Surveyor-General of NSW for Figure 1 in Chapter 67; Plate 57 © NSW Department of Land and Water Conservation 1997; Space Imaging for permission to use Plate 18; Swiss Federal Office of Topography, DHM25©1997, 1263a for Figure 16 in Chapter 10; Taylor and Francis, London, for Figure 4 in Chapter 47; The Caliper Corporation for permission to reproduce Plate 50; Trimble Navigation Ltd for Plates 23 and 24; UCL 3D Image Maker Plate 20.

While every effort has been made to trace the owners of copyright material, in a few cases this has proved impossible and we take this opportunity to offer our apologies to any copyright holders whose rights we may have unwittingly infringed.
