

W01.2

NLPG – Moving Forward – the integration and interoperability issues.

John Couzens, National Gazetteers Co-ordinator, IDeA

The NLPG, built upon BS7666, is now reaching a stage of maturity that requires it to be integrated within Local Authority operations where access to a gazetteer is a pre-requisite, to maximise benefits. This workshop will take typical examples of local authority operational work and develop the interoperability and integration issues in a way that encourages early adoption of this process.

Other issues covered will also include the IEG2 submissions, National Street Gazetteer (NSG) enhancements, linkages and updates on LASER and NLIS as well as the new accreditation processes to be implemented for NLPG and BS7666.

This workshop is ideal for all local authority representatives, especially those involved in implementing the national infrastructure projects and also suppliers of operational solutions to local authorities.
