The GLOBAL GAZETTEER is a database of some 4,000,000 populated places around the world enriched with information on latitude/longitude, postcodes, telephone area codes, administrative areas at several levels (e.g. counties, provinces, states), population, area, height, time zones & daylight saving time, the preferred or alternative name of the place and the accented characters in the name (coded with ISO 10646/Unicode). The administrative function or type of place is also coded, e.g. whether the place is a country capital, a state capital, a county seat or is one of a particular type of place identified within the country (e.g. a Stadt or Kreisfreie Stadt, in Germany). Additional databases linked to the GLOBAL GAZETTEER are concerned with the Administrative areas in the world and with Ports & Airports.

About 75,000 administrative area records are enriched with population, 'parent' area (so that a complete hierarchy can be produced back to the total country), the designation of the area (e.g. county, district, etc.), latitude/longitude, area and capital. About 30,000 port/airport records are enriched with location, place name, height, postcode, telephone area code and some specific details relating to the installation.

Records can be selected on any of some 30 fields.

Products: Publications, Software, Complete Systems
Services: Data, Implementation, Management Services, Procurement, Training

APIC supply award winning software products that provide solutions for managing and utilising geographic data. APIC software is used internationally in Local and National Government, Utilities, Emergency Services and Commercial companies.

APIC is a subsidiary of the multinational European Aeronautics Defence and Space company and is a key player in the EADS Geomatics Division which comprises some 300 Geomatic experts from UK, France and Germany.

APIC products include:

APIC4: A powerful, comprehensive GIS toolkit which runs under Windows and UNIX. It comprises a kernel **APIC-SPACE**, a spatial application generator and modules for plotting, analysis, editing and data visualisation.

APIC/Web: An extension to a web browser for APIC4, it allows direct access on the Internet/Intranet to APIC data and applications.

APIC-Connect which allows APIC software to connect and integrate with other software. Links to document Management, Geo-referenced Video, and Property Management software are currently available, with more products planned.

APIC-Shift provides a comprehensive solution to the problems caused to GIS users by the Ordnance Survey Positional Accuracy improvement program.

Building-One a powerful solution for Building and Facilities management.

APIC are also a reseller of the FME product range from Safe Software.

Autodesk is a world leading supplier of GIS precision mapping and design solutions; developing systems for the desktop through to enterprise, intranet, Internet and mobile.

Autodesk provides powerful tools to help access, maintain and analyse your spatial information efficiently, by providing cost-effective ways to meet demands for increased services and streamlined operations.

GIS at Autodesk is "bringing information down to earth".

Autodesk Utility customers in the UK and Ireland include: Southern Water, Yorkshire Electricity, North West Water and Northern Ireland Electricity. Autodesk also has an extensive customer user base in telecommunications, central and local government including; Dumfries and Galloway Council and City of Bradford Metropolitan District Council.

Autodesk Worldwide Consulting Services (WWCS) offers customers and partners a centre of excellence for the implementation of solutions based on world leading technology. An impressive client list in government, utility and telecommunication industries, including Thames Water, are currently reaping the rewards and benefits of the enterprise solutions delivered successfully by the team. For more information, contact David Pettit +44 1252-788400.

Cambridge Computer Consultants (UK) Ltd. is one of the UK's leading geographic information management consultancies. The company has a reputation for service quality in the following areas:

- **Procurement** – in the last 5 years we have specified, selected and negotiated the supply of around £60 million of GIS software, data and services for public sector clients.
- **Project management** - we have managed award winning projects and some of Europe's largest, most technically advanced GIS developments.
- **Planning** - we have written best-practice publications for UK government and developed GIS strategies and business cases for some of Europe's most prominent GI users.
- **Cost-effective and professional** - we provide associate services to several World-class management consultancies.
- **Impartial** – providing impartial advice is our core business - we

have no formal links with product or service providers - we do not sell software, hardware, data or any form of technical development or data processing service.

For more information about our consultants, our services, and how we've helped our clients to be successful, please visit our web site at: www.gis-consulting.com

Concurrent Appointments
International provides a specialist
recruitment service to organisations
involved in GeoInformation
Technology.
We specialise in the recruitment of
GIS Specialists, Systems and
Programming Specialists, Geodata
Specialists, Cartographers, Data
Modellers and Statistical Data
Specialists. We handle both
technical and sales appointments,
principally on a permanent
introduction basis, and to a lesser
extent on a temporary supply basis.
Since our establishment in 1989, we
have accumulated a database of some
3000 candidates with experience
across the entire geospatial systems
industry.

GMAP Consulting has developed a suite of GIS products under its Microvision brand.

Microvision products will empower you to increase sales and reduce risks by:

- understanding your customers, their behaviour and preferences.
- targeting your key customer groups
- benchmarking your sales performance by channel
- defining your local marketing areas
- predicting the impacts of changing network or channel configurations
- optimising your channel and product mix
- forecasting changes in the market and their impact on your business

Microvision is being developed for all European markets and over the next two years extended to north and south America and Asia/Pacific.

Informed Solutions is the leading, independent Spatial and Geographic Information Systems (GIS) Consultancy in the United Kingdom and has an extensive client base in the telecommunications, utilities, oil and gas, transportation and government sectors.

As an independent Consultancy we enjoy a co-operative partnership with the leading spatial technology suppliers, ensuring that we understand, best represent and implement the capabilities of their respective technical platforms. Our consultants are fully qualified in the leading spatial technologies provided by organisations such as ESRI, Genasys, Intergraph, MapInfo, Oracle, Smallworld and Vision. As such, we are well positioned to provide impartial and informed Consultancy, which is directly relevant to a client's specific requirements, project timescales, budget and current technology infrastructure.

We offer a full range of spatial Consultancy services covering all aspects of GIS and data capture strategies, programme and project management, and full project lifecycle support. Our commitment is to provide exceptional professional services by maintaining high standards of quality, adopting best practice and pragmatically applying recognised industry standards such as PRINCE for project management, SSADM for traditional systems development projects and DSDM for rapid applications developments. Intergraph is a worldwide provider of technical solutions offering a full range of software and services, including consulting, systems integration, training and support. Backed by over 30 years of industry leadership, technological innovation and a global service infrastructure, Intergraph, together with its customers around the world, has been involved in many of the decade's most complex and significant engineering and mapping projects. The Mapping & GIS Solutions division provides GI solutions across all industry sectors from central and local government, through transportation and defence, to the private and commercial sectors. With a proven record of delivering successful systems, from single seat to corporate solutions, we are happy to provide anything from ready to use products, generic GIS technologies for the web, mobile and desk top through to complete end-to-end solutions as diverse as e-commerce, on-line government and full cartographic production systems. **GeoMedia** is a fully integrated suite of products and technologies that can

1: full trade listing

be applied from standalone to corporate, from desktop, through web to mobile. All GeoMedia products have been engineered on one common architecture to the philosophy of OpenGIS using Data Server technology to give direct access to an unparalleled range of data formats and sources, without translation: GML file, OGC WFS, MapInfo, AutoCAD, MGE, Framme, Esri, Oracle Spatial, SQL-server, MicroStation, Smallworld and any ODBC data source (includes spread sheets, text and dbf).

They can be used out of the box but also extended and customised using industry-standard tools.

Alternatively, the modular, component architecture allows developers to embed GeoMedia objects into their own applications or to build new ones.

All of which makes GeoMedia the most robust, scaleable, flexible and open suite of GI products available today.

Itronix Corporation designs, manufactures and deploys mission critical wireless field automation solutions for mobile workforces. Itronix recently acquired Husky, a UK based manufacturer of rugged handheld computers to become the global leader in mobile computing solutions for vertical business applications, including:

- Field Services
- Emergency Services
- Telecommunications
- Meter Reading within Utilities
- Asset management across transport, automotive and energy sectors.

The Itronix product range includes the Husky feX21, the worlds first rugged H/PC, Husky handheld computers and a series of ruggedized notebooks. All Itronix hardware is backed by software solutions provided by business partners and supported by a distributor network operating across five continents. Itronix operations include headquarters in Spokane, USA, European headquarters in Coventry UK with further Group companies in France and Germany.

Know Edge Ltd is the oldest, specialist LIS/GIS consulting company in the UK providing truly independent advice from strategy to implementation. Worldwide experience in formulating and implementing corporate LIS/GIS strategies within the private and public sectors. Clients have included: EU Statistics Office; EU PHARE Programme; United Nations FAO; Ordnance Survey GB; European Utilities; Banks; and Central & Local Government organisations.

Application areas have included: power & water utilities; financial services sector; environmental agencies; property management; mapping services; cadastre and land registration agencies.

Specialist services include: the formulation of business led corporate strategies; feasibility studies; support of tendering; system benchmarking; implementation planning including institutional and organisational aspects; business process re-engineering; project management; and audits of mature installations. Fifteen years of GIS activities have provided Know Edge with expertise in the management, organisational and technical aspects of GIS projects. The multi-disciplinary Know Edge team provides clients with the essential ingredient of practical knowledge of implementation issues. The team is augmented by a network of internationally recognised experts in creating consulting teams tailored to the specific requirements of clients. Over 90% of clients have invested in LIS/GIS following feasibility studies conducted by Know Edge Ltd.

MapInfo provides location-based solutions that enable organisations to transform information into business advantage to better understand their markets and customers and or manage resources and assets.

MapInfo offers a range of open and fully scaleable products, which span the enterprise from PC software and component technology through server-based solutions, internet and mobile internet deployment, as well as geographic and demographic data products, consulting and support services.

Key markets include public sector, telecommunications, financial services, transportation, utilities and retail and well as functions common to all businesses, such as sales, marketing, customer services and operations.

MapInfo Professional[®]

The industry standard for solving geographically-related business problems - enabling flexible visualisation and analysis of data.

MapInfo MapX[®]

A cost effective, robust ActiveX component, enables developers to add mapping functionality to any application.

MapXtreme[®] for NT or Java

A mapping application server, which enables organisations to deploy analysis via the Internet.

SpatialWare

Enables storage and management of spatial data within corporate RDBMS environments.

MapInfo MapMarker[®]

Turns ordinary data records, containing an address, place name or postal code, into geographic objects that can be instantly displayed on the map.

Routing J Server

The web-based solution to direct and drive customers to your products, stores and services.

Ordnance Survey, Britain's national mapping agency, is renowned as a world leader in the field of geographic information, producing a wide range of computer data products and paper maps for business, leisure, administrative and educational use. They are at the heart of a technological revolution, with e-business and computer mapping transforming business and public services.

Over the years Ordnance Survey has created and maintained the National Topographic Database (NTD) (which is held on computer at their head office in Southampton). It features details as fine as the shapes of individual buildings, the precise alignment of roads and pavements, and the exact location of public telephone boxes. The NTD is being further enhanced and restructured to make it even easier for people's information to be integrated in to it, held as separate layers or associated with Ordnance Survey mapping. The whole project is establishing a new seamless information base as part of the Digital National Framework™ (DNF)™ – an initiative to ensure that Ordnance Survey and its partners are the content provider of choice for location-based information in the new information economy.

Ordnance Survey is the national mapping organisation for Great Britain, providing definitive, up-to-date digital map data to a wide range of organisations for business and professional use.

Land-Line® is the most detailed large-scale digital mapping of Great Britain. It covers urban, rural and moorland areas at 1:1250, 1:2500 and 1:10 000 scale respectively. Land-Line provides a detailed representation of the real world for applications requiring accurate large-scale mapping and is continually updated with the latest information.

Superplan Data® is the most detailed digital mapping of Great Britain in site-centred form. This unique large-scale digital product is specifically designed to appeal to CAD users.

ADDRESS-POINT® is a data product that provides a National Grid coordinate and a unique reference code for every postal address in England, Scotland and Wales.

Created and maintained from Ordnance Survey digital map data and the 26 million addresses in the Royal Mail's Postcode Address File (PAF®).

Code-Point® is a centroid dataset from the mean of addresses within the 1.6 million postcode units, to a resolution of 1m and snapped to the nearest reliable addresses. Also available as polygons depicting the

spatial relationships between postcodes.

Land-Form PANORAMA® is the digital representation of the contours from 1:50 000 scale Landranger® maps, available as digitised contours or as a digital terrain model (DTM). Land-Form PANORAMA has applications for telephone and radio planning and propagation, geological planning, GIS, fly-through sequences using DTMs and for environmental impact analysis. This product is particularly useful to those customers requiring large areas of height data.

Land-form PROFILE™ is the most accurate and definitive height dataset available for Great Britain. It provides digital representation of the contours from 1:10 000 scale maps, available as digitised contours or as a DTM. It is particularly suitable for planning applications, civil engineering schemes, flood risk assessment and visual impact analysis.

OSCAR® family of products consists of road data products derived from a single definitive source.

1:10 000 Scale Raster is the new product created from Ordnance Survey's groundbreaking 1:10 000 scale derived dataset. It depicts high levels of detail, including field and road boundaries, fences, road names and buildings. 1:10 000 Scale Raster can be used as a detailed digital map image, as a backdrop for vector data or overlaid with your own business data. Full GB coverage is now available in colour or black and white (400dpi) formats.

1:25 000 Scale Colour Raster dataset will reflect the specification used for Explorer™ maps, including valuable features such as contours and rights of way information. Coverage for England and Wales is planned to be available from autumn 2001; Scotland to follow in 2003, in line with the completion of Explorer coverage of Great Britain.

The product will be supplied as 10 km by 10 km tiles based upon the National Grid and as Great Britain, England, Wales and Scotland (2003) coverages.

1:50 000 Scale Colour Raster data provides all the map detail from the Landranger series, including roads,

footpaths, buildings and contours. The data can be displayed on a computer screen as a map image, as a backdrop to vector data, or be overlaid with your own business data. 1:50 000 Scale Colour Raster is now derived directly from a digital database; this allows for improved image quality and full edge matching.

Meridian2™ is a mid-scale dataset created entirely to suit customer needs in the GIS market. It consists of two themes; communication and topographic.

Communication theme contains road information – motorways, A & B roads, minor roads over 200 m and railways.

Topographic theme contains DLUAs, coastline boundaries, settlement names, inland water, woodlands and gridded heights, providing the end - user with a high - quality level entry product.

Strategi® is a 1:250 000 scale vector link and node dataset ideal for applications requiring an overview of geographical information of Great Britain.

Boundary-Line™ is a specialised dataset of voting and administrative boundaries including the applicable names and census agency codes. It includes the full hierarchy from civil parish through to parliamentary and European electoral constituencies. The data is derived from 1:10000 scale boundary record maps providing the accuracy and detail required.

Historical Map Data: the availability of this data allows GIS users flexible access to a wealth of historic topographic material, providing a view in time.

Siteplan Data™ is the new raster data image of the popular Siteplan® product and has been designed with the smaller private planning application in mind. The image depicts all the detail of our large-scale mapping in a format specified by most planning authorities and is priced to include a one-year copyright licence.

Internet Street Mapping (ISM) is Ordnance Survey's raster street-level dataset, providing detailed backdrop mapping predominantly for use on

web sites and corporate Intranet sites. The clarity of the buildings and the structural layering of roads represents real-world situations previously not depicted on web sites at this scale.

Full GB coverage is now available. All digital map data products can be manipulated, enhanced or simplified to meet the precise needs of customers. For further information, please contact the Digital Helpdesk, phone 023 8030 5266.

Ordnance Survey, the OS Symbol, Code-Point, Land-Line, Landranger, Superplan Data, ADDRESS-POINT, Land-Form PANORAMA, OSCAR and Strategi are registered trademarks and Land-Form PROFILE, Explorer, Meridian, Boundary-Line and Siteplan Data are trademarks of Ordnance Survey, the national mapping agency of Great Britain.

PocketGIS is a powerful mobile Geographical Information System (GIS) for field data capture which can display and edit map geometry and attributes. PocketGIS brings real GIS functionality to highly portable Windows[®] CE devices, which are lightweight, convenient and have a long battery life. Ruggedised systems are also available.

PocketGIS can be linked to a Global Positioning System (GPS) receiver for real time location tracking and data capture. The GPS position is projected to the chosen co-ordinate system in real time offering instant verification of survey results.

PocketGIS can be connected to a laser range finder and provides a comprehensive set of laser survey functions. Software to connect to digital cameras and bar code scanners is also included.

PocketGIS is supplied with a connection utility, which handles the exchange of map data in a variety of

popular GIS formats. This utility also allows you to construct new data set definitions with full control over attribute forms. Alternatively such definitions are constructed automatically from input map data files.

PocketGIS provides external interfaces to all key functionality allowing the development of third party customised solutions which makes PocketGIS an ideal platform for mobile GIS applications.

The QuickAddress range of address management software captures addresses accurately and efficiently. Based on the Royal Mail's Postcode Address File (PAF), QuickAddress returns a full address from either a postcode and premise number or a partial address. QuickAddress is easily integrated within the user's own application, such as a database or mapping system. A wide range of search criteria is available with extensive configuration and pasting options. Additional postcode related data can be returned from the valid address, such as geodemographic codes, grid references and ADDRESS-POINT™ data. The software is available across a wide range of platforms, in both batch and on-line mode.

The Address Management Centre is responsible for:

- Managing and developing the Royal Mail database of all known UK addresses, the **Postcode Address File (PAF[®])**.
- Managing and developing the Royal Mail redirections database (**CREDO**).
- Ensuring address management information reaches both business and social customers through the appropriate media.

- Promoting correct addressing and the use of Postcodes.

Royal Mail offers PAF^R in a variety of formats and media:

- Ready made applications and services available directly from Royal Mail or through Licensed resellers.
- Raw data provided on floppy disc, digital audio tape (DAT) and cartridge.
- Printed in directory format.
- Internet (Postcodes On-line).
- Telephone (Postcode Enquiry Line)

Listed below are Royal Mail managing address data products and services, derived from PAF^R:

Royal Mail UK Addresses – PAF^R database on CD-ROM, with two software options:

- **Address Manager** – an enhanced search and data management tool.
- **Address Finder** – a basic search and view tool.

Postcode Address File on Magnetic Media, **Postzon** (Grid reference codes, Ward codes and NHS codes) – PAF^R and Postzon are provided as raw data files, enabling it to be processed to suit your own IT applications. Formats available are DAT, and 3490E cartridge.

Postal Address Book (PAB) – Sourced from PAF^R, PABs are regional directories that contain all known UK business and residential addresses. The directories include details of Royal Mail products and services, local information, Postcode and Post Town listings, Postcode District maps.

Internet (Postcodes On-line) – This is available through the Royal Mail website

(www.postcodes.royalmail.com). The service provides a look up and search facility for Postcodes and addresses, allowing a maximum of 50 checks per day.

Telephone (Postcodes Enquiry Line) – An enquiry service providing correct addresses and Postcodes (08457 111222).

There are also a number of licensed resellers of Royal Mail data:

Value Added Resellers (VARs) – Independent licensed companies who use PAF^R to develop their own

managing address data products and services.

Below is the Royal Mail managing address data (national change of address) service derived from redirections database (CREDO)

National Change of Address (NCOA) - Available through Royal Mail licensed Bureaux. Companies supply their customer mailing list to one of our NCOA Bureaux and they check it against the NCOA database. Any matches are highlighted, and the new names and addresses supplied or the records flagged for suppression, depending on the service you choose.

With headquarters in Munich and sales centres around the globe, SICAD Geomatics GmbH & Co. oHG is 100 percent subsidiary of Siemens Business Services (SBS) and hence Siemens AG.

SICAD GEOMATICS has more than 200 employees around the globe, who develop and market the SICAD Geographical Information System (GIS) as well as application products, and who also provide the associated services.

Besides its own direct sales the company cooperates with numerous national and international sales channels and solution partners. SICAD from SICAD GEOMATICS has been on the market since 1979 and is one of the world's leading geographical information systems. Several thousand server installations in 17 language versions worth more than EURO 500 million in total are already in use worldwide. SICAD is backed by an experienced development team at several sites around the world whose work is aimed at constantly gearing the attributes and qualities of the family of products to technical progress and at combining these attributes and qualities in such a way as to meet the needs of the customer.

The emphasis in SICAD is on applications for utility and waste disposal companies, telecom

companies, land management and local authorities. SICAD GEOMATICS places great emphasis on the management of geodata and provides standard applications for many areas of use.

The name SICAD stands for a family of GIS products for open platforms:

- **SICAD/open** under Windows NT and UNIX with all the advantages of open architecture based on international standards.
- **SICAD Spatial Desktop** (SICAD/SD) as a hybrid, PC-based geodesk under Windows.
- **SICAD Geospatial Data Server** (GDB) as a geographical database for all geodata based on standard RDBMS.
- **SICAD Internet Suite** for access to and distribution of geodata on the internet and intranet.
- Standard application **SICAD-UT** for utility and waste disposal companies.
- **SICAD-LM** for land management applications.
- **SICAD-Telcom** for telecom companies.
- and more

SICAD GEOMATICS became a principal member of the Open GIS Consortium, Inc (OGC), Wayland Massachusetts in 1997. With SICAD GEOMATICS, Siemens AG, Munich is now the first European company to hold a seat on the OGC board of directors, which monitors the technical committee of the organisation and plans cooperative industrial development programs.

SICAD employees

More than 300 people within Siemens group currently work on the SICAD family of products, around 100 of whom are based outside Germany. A significant part of the development work takes place abroad.

Taylor & Francis Group is an international scientific publisher, established in London, in 1798. Our dynamic books programme in GIS and remote sensing enjoys a close synergy with our two leading research journals, the *International Journal of Geographic Information Science* and the *International Journal of Remote Sensing*, both of which are available as print and electronic on-line editions.

For 2001/2002 we are showcasing a number of important new books in GIS and Remote Sensing.

1: full trade listing

2001 sees the launch of the comprehensive *Manual of Geospatial Science and Technology* edited by John Bossler, *Virtual Reality in Geography* edited by Peter Fisher and David Unwin, *Information Systems for Urban Planning* by Robert Laurini, *Mapping and Analysing Crime Data* edited by Alex Hirschfield and Kate Bowers, *Digital Photogrammetry* by Yves Engels and Michel Kasser, and *Online GIS and Spatial Metadata* by Terry Boosomaier and David Green.

2002 will see a number of leading-edge works including *GIS Basics* by Steve Wise, *Uncertainty in Geographic Information* by Jingxiong Zhang and Mike Goodchild, *Remotely Sensed Cities* edited by Victor Mesev, *Small Scale Map Projection Design* by Frank Canters, *Environmental Modelling with GIS and Remote Sensing* edited by Andrew Skidmore, *Community Participation and GIS* edited by Will Craig et al., *GIS, Environmental Modelling and Engineering* by Allan Brimicombe, and *Geographic Information Management in Local Government* by Ian Gilfoyle and Peter Thorpe.

Products: Data, Publications

The Coal Authority was established by Parliament to undertake specific statutory duties as set out in the Coal Industry Act 1994. One important duty is to provide information it holds on coal mining activities to its stakeholders.

The Authority continually strives to improve both access to, and availability of, information it holds. The Authority demonstrated its commitment to this objective by launching the national Internet mining reports service in March 2001. It is continuing to work with both public and private sector organisations to provide enhanced

information services to customers, in the format they require, upon demand. A vital factor in the strategy is the need for the provision of such services to be made via a single access point. Work continues to meet this objective. The Authority continues to look to meet Government initiatives for the provision of information to stakeholders well in advance of targets set.

The Data Depot's database is the culmination of over twenty years experience of working with thousands of UK organisations providing information and target marketing.

Our clients cover all business sectors including retail, leisure, property, distribution, banking, insurance, oil, automotive, telecommunications, advertising, market research, health care and government. People regularly use our information to access locations, analyse local markets, plan territories and understand consumer lifestyle and purchasing.

Whether you need information on demographics, consumer lifestyles and markets, or postcodes, addresses and mapping we let you carry out business planning in your chosen analysis software.

Alternatively, if you do not wish to incur the time and expense of building an in-house mapping or analysis system, you can ask our AreaData service for reports on any location you wish to assess. You simply select from a menu of standard reports for the United Kingdom and countries across Europe and have information rapidly sent to you. All you have to do is telephone us with your requirements.

If you require the occasional map you may wish to use our mapping bureau service rather than spend time building a mapping system and learning how to use it effectively.
